

An exciting open post-doctorate position in spatial ecology!

The Hübner lab at the Galilee Research institute (MIGAL), Israel offers a post-doctorate position in plant ecology and evolution. The project involves the analysis of a species distribution and landscape genomics using advanced computational tools in order to study adaptation to future climate. We are looking for a highly motivated individual with experience in spatial ecology with firm knowledge in species distribution models to join this exciting and high-impact project!

The ideal candidate should have a relevant research experience in ecology, evolution, biogeography, spatial modeling, or related fields of research. Some background in bioinformatics and/or population genomics is an advantage. Although the objectives and direction of the project are established, the candidate is highly encouraged to bring his/her own unique direction and ideas to the project.

The post-doc position duration is two years subject to review after the first year; further extension may also be possible. Interested candidates should send a cover letter, CV, names and contact details of two references, and a one-page description of their research accomplishments, all as a single PDF file.

Please send questions and application materials to: sarielh@migal.org.il
